Systems Integration

Systems Integration is the most frustrating necessity in today's Healthcare IT industry. The flow of information to each ancillary system must be seamless. Everyone needs their information, and needs it NOW!

Making that happen is one of the most challenging issues faced by any Healthcare IT Department. It takes experience. It takes knowledge. These qualities are expensive. Budgets demand you control costs, yet you need the expertise.

Do you buy? Use a consultant? How do you obtain knowledge, experience and efficiency at a reasonable price?

LOIS TICKLE CONSULTING SERVICES, INC. HAS THE ANSWER!

LTCS Inc. provides THE way to eliminate unnecessary expenses from your project budget. We specialize in remote integration services. Utilizing high-speed secure connections, systems integration is performed off-site. This provides you with experience, knowledge, increased efficiency and successful, timely project completion at an affordable rate – the only time you pay for is time worked!

On-site labor is fraught with hidden costs. Consultants spend time answering phone and email messages, and even working for other clients. How often have you had

consultants cooling their heels at your expense, waiting for a resource or report? This NEVER happens with our Remote Integration Specialists. Your specialist only bills for time worked on your projects!

HOW DOES LTCS INC. DIFFER FROM THE COMPETITION?

Three distinct categories separate us from the competition.

1. Experience

- LTCS Inc. provides a wealth of creative solutions in the integration arena.
- Seventeen years of experience in Healthcare Information Technology and Integration.
- Ten years of experience as a Healthcare IT employee.
- Seven years of experience via remote connectivity!
- We have already seen and successfully resolved most major healthcare integration issues. Our experience provides a faster, more reliable project completion.

2. Knowledge

- We have a compilation of successful integration solutions covering multiple standards, data types, protocols and applications, including:
 - › HL7, XML, X12, Files
 - › ADT, Orders, Results (including discrete)
 - › TCP/IP, SNA, VPN, FTP
 - › Laboratory, Radiology, Cardiac, Materials Management, Dietary

- Proven development, maintenance and troubleshooting methodologies enable increased efficiency in problem resolution.
- Our experience with multiple systems has provided the knowledge and experience you need for your next integration project.

3. Remote Connectivity

- Flexible – Your Specialist is never en-route or delayed when you need them. We are always just an email or phone call away!
- Efficient – You never have to wait days for the answer you need. Integration issues are resolved in significantly reduced timeframes.
- Secure – High speed remote connectivity makes the most of secure connections to your network. We work with you to utilize the best connectivity for your environment.
- Economical - Gone are travel and living costs – plane tickets, hotels, meals, and transportation. These same unnecessary costs, often amounting to thousands of dollars on a monthly basis, can now be directed toward *actual project expenses*. Best of all, you only pay for time spent on YOUR projects!
